

# SysCurve PDF Rotator Tool - Working Guide

---

## Introduction

SysCurve PDF Rotator fixes sideways or upside-down PDF pages on Windows.

Rotate full documents or specific page ranges and save a new rotated copy offline.

## Key Features

- Rotate pages 90, 180, or 270 degrees.
- Per-file rotation selection in batch mode.
- Page range rotation for selected pages only.
- Drag and drop input with a clean grid view.
- Non-destructive output with safe naming.
- Skips protected or invalid PDFs and reports them.
- Digital signature warning before changes.
- Cancel support for long runs.

## System Requirements

- Operating System: Windows 7, 8, 10, 11

- Processor: Intel or equivalent
- RAM: 8 GB or more recommended for optimal performance
- Hard Disk Space: 500 MB for installation, plus space for output files
- .NET Framework: Version 4.7.2 or higher

## Installation Steps

1. Download the tool from the official SysCurve website.
2. Run the installer and follow the on-screen instructions.
3. Launch the program from the desktop icon or Start menu.

## How to Use

1. Launch SysCurve PDF Rotator.
2. Add PDFs using drag and drop or Add Files.
3. Choose a rotation angle for each file.
4. Enter optional page ranges or leave All.
5. Select an output folder and click Rotate.
