

SysCurve PDF Splitter Tool - Working Guide

Introduction

SysCurve PDF Splitter breaks large PDFs into smaller files by page, range, or target size on Windows.

It is ideal for sharing smaller attachments or extracting only the pages you need, with originals kept safe.

Key Features

- Split each page into individual PDF files.
- Split every N pages for consistent chunks.
- Extract page ranges such as 1-3,5,10-12.
- Split by target file size while keeping page boundaries intact.
- Apply different split rules to different files in the same batch.
- Large job warnings and safe output naming for reliability.

System Requirements

- Operating System: Windows 7, 8, 10, 11
- Processor: Intel or equivalent

- RAM: 8 GB or more recommended for optimal performance
- Hard Disk Space: 500 MB for installation, plus space for output files
- .NET Framework: Version 4.7.2 or higher

Installation Steps

1. Download the tool from the official SysCurve website.
2. Run the installer and follow the on-screen instructions.
3. Launch the program from the desktop icon or Start menu.

How to Use

1. Open SysCurve PDF Splitter.
2. Add PDFs with drag and drop or the Add PDFs button.
3. Choose a split method for each file in the list.
4. Enter the specific rule, such as N pages, ranges, or target size.
5. Select an output folder for the split files.
6. Click Split PDF and review the summary when complete.
