SysCurve PST Email Address Extractor - Working Guide

Introduction

SysCurve PST Email Address Extractor specializes in one precise task: harvesting every sender, recipient, and CC/BCC address stored inside Outlook PST files—without modifying a single message. Whether you're building a marketing list, preparing discovery data, or simply cleaning duplicates from an archive, the tool scans each item, lifts the addresses, removes repetitions, and lets you save the clean list in the format you prefer.

Key Features

- Save extracted addresses straight to CSV, VCF, JSON, HTML, TXT, or XML.
- Built-in deduplication guarantees each address appears once—no manual cleanup.
- Source PSTs remain untouched; the tool generates address lists only.
- Preview emails before extraction to confirm you're selecting the right data.
- Compatible with all versions of Microsoft Outlook and Windows operating systems, making it a versatile tool for diverse user needs.

System Requirements

- Operating System: Windows 7, 8, 10, or 11 (both 32-bit and 64-bit editions).
- Processor: Intel or equivalent processor for efficient processing.
- RAM: Minimum of 8 GB recommended for handling large-scale conversions.
- Hard Disk Space: 500 MB of free space for software installation, plus additional space for files.
- Microsoft Outlook: Required for PST file creation.
- .NET Framework: Version 4.7.2 or higher must be installed on your system.

Installation Steps

- 1. Download SysCurve PST Email Address Extractor from the official website.
- 2. Run the installer and follow the prompts provided by the setup wizard.
- 3. Launch the program from the desktop shortcut or Start Menu.

How to Use

1. Launch the SysCurve PST Email Address Extractor tool.

2. Click on the 'Add File' button to upload your PST files.
